

Silvasud holds the key to a progressive garden

Silvasud can draw up a project for a garden that will last because of their use of sustainable infrastructure. This family business employs the same skills and expertise whatever the size of your garden. *"It's a real challenge for us!"* explains the manager, Luc Percie du Sert. *"Our teams go on site and examine the soil from an agronomic and technical point of view. We also take lighting and watering into consideration*

because over 80% of the success of a garden lies in what you don't see." As your garden is your haven of peace, your go-to area, it needs to adapt over the years according to your means, your tastes, the age of your children, and so on. Their expertise in regional conditions is indispensable to the success of your outdoor projects (whether you live there full-time or not) and is Silvasud's trademark. They also offer tai-

lored garden maintenance solutions. *"It is essential to keep a regular, attentive eye on things. And that means much more than simply mowing the lawn,"* continues Luc Percie du Sert. *"Our very capable technicians notice plant deficiencies and know when to use plant health products . . . You can't afford to make a mistake and you must able to adapt to Mediterranean conditions."* This is a key factor when you

are helping the client with his or her wildest dreams . . . Silvasud has been environment experts for ten years now, with one golden rule – never forget that the feasibility survey of a garden is more important than the ornamental effect if you want it to last. The rule has yet to be proved wrong.
